About Me

I am a Gameplay Programmer creating interesting mechanics to realise the vision of Game Designers.

As a Gameplay Programmer, I love to see games come together from their original designs with my work. I've made a variety of projects, from games with a primarily narrative focus, to pathfinding simulations, to more complex strategy games, across multiple engines such as Unity and Unreal. I'm aiming to improve my skills by working in a team with other programmers, and to create innovative games together.

Education

Bachelor's in Computer Games Programming at University of Gloucestershire (In Progress)

A Levels at Faringdon Community College

Projects

Minor Gods (2025) - A turn-based PvE game with roguelike elements in Godot engine.

Role: Gameplay Programmer. I constructed strong core systems that allowed designs for attacks and characters to be made easily.

Boid Simulation (2025) - A simulation of flocking behaviours created in Unreal engine using C++.

Role: AI Programmer. I created a simulation for ai behaviours, and effectively optimised it.

Cause of Death (2025) - A horror visual novel about being able to see the future, created for a game jam.

Role: Narrative Designer. I learned a lot about planning projects and keeping within a reasonable scope.

You Are Going To Die Today (2025) - A short horror visual novel about not being able to make choices, created for a game jam.

Role: Narrative Designer. The project was made in 24 hours, teaching me about making rapid prototypes and good time management.

Boarders (2025) - A tower defense game inspired by Plants Vs Zombies created in Unity for a game jam.

Role: Gameplay Programmer. I worked effectively with my team to make the whole game over the span of a weekend.

Labyrinth: Wayward Trials (2025) - A co-op top down puzzle game in Unity.

Roles: Project Manager, Gameplay Programmer. I learned how to manage a team and gained a better understanding of how Designers and Artists work.

Unreal Character Creator (2025) - A character creation system made in Unreal Engine.

Role: Gameplay Programmer. I used C++ and blueprints in tandem to create a character creation system, with character saving and loading.

Golf Mobile Game (2024) - A golf mobile game created in Unity.

Role: Gameplay Programmer. I learned how to create gameplay mechanics for mobile devices.

Invading Space (2024) - A space invaders inspired arcade-style game created in C++ using PlayBuffer.

Role: Gameplay Programmer. I created a game using only a basic framework for game creation, giving me a greater understanding of C++.

Re-Customisable Character Creator (2023) - A character creator and short gameplay section made in Godot, where the creator can be re-entered at any point.

Role: Gameplay Programmer. Learned about how to effectively store character data and manage changes to character appearance during gameplay.

Undeath (2022) - A fire emblem inspired top down tactics game created in Godot.

Role: Gameplay Programmer. I learned about how to organise larger scale programming projects to allow more easy implementation of later features.

Work Experience

Volunteering at Tregoze Primary School, May-July 2025

Project Roles

- Gameplay Programmer
- AI Programmer
- Playtester
- Quality Assurance
- Game Design
- Level Design
- Narrative Design
- 3D Modelling
- UI Design
- Character design
- Pixel Art
- 2D Artist

Software

Unity, Unreal Engine, Godot, Ren'py, C++, C#, Python, Krita, Blender, Aseprite

Skills

- Project Management
- Working to deadlines
- Working in a team
- Storyboarding
- Task management
- Code organisation
- Research
